

PTT+ and LMR, together for the better

Seamless communications
between LMR and PTT+

Push to Talk Plus (PTT+) now supports interfaces with Land Mobile Radio (LMR) systems. PTT+ devices working over 3G, 4G LTE and Wi-Fi networks can talk directly to your existing LMRs at a fraction of the cost of purchasing new radios.

This new integration lets PTT+ users, LMR users and dispatchers communicate directly while enjoying a consistent user experience across the board.

Use PTT+ and LMR as one, effortlessly.

Because of the IP-based interface and Verizon's 3G and 4G LTE networks, users enjoy fast, reliable communications between PTT+ and LMR systems, all while still enjoying features such as:

- Group registration
- Group calling
- Talker ID
- One-to-one calling
- Call alerting

Don't compromise between LMR and PTT+.

Using PTT+ and LMR together, you get push-to-talk services that help you increase connectivity, improve productivity and reduce costs. With LMR and PTT+ together, you get things like:

- Fast, secure, reliable communications unbound by coverage area or network type.
- LMR access for those who cannot or will not carry a radio.

- One device to access broadband data apps, LMR and PTT+.
- The ability to quickly add PTT+ users as required.
- Lower costs and improved functionality without need for new sites, frequencies or radios.
- Benefits of LMR augmentation.
