23.2.1.3 Ethernet Virtual Private Line (EVPL) MAE Service

Contractor's Description of Service:

Verizon's Ethernet Private Line (EPL) MAE service provides a logical Point-to-Point connection between two Customer locations. EPL service enables Customers to connect their Customer Premise Equipment (CPE) using an Ethernet interface and provide one Ethernet Virtual Connection (EVC) between two Customer locations.

Verizon's Ethernet Virtual Private Line (EVPL) MAE service provides an Ethernet Virtual Connection (EVC) between two Customer locations similar to Ethernet Private Line service supports the added flexibility to multiplex multiple services (EVCs) on a single UNI at a Customer's hub or aggregation site.

Verizon's EPL and EVPL MAE services provide three Class of Service (CoS) options including; BASIC, PRIORITY and PREMIUM. The CoS options allow for differentiated service performance levels for different types of network traffic. CoS options allow Customers to prioritize mission-critical traffic from lesser priority traffic in the network.
